

Packages

Are you struggling?

Plan for today

- Brief recap
- **Packages**

Recap of using variables

- Most of the time, we want to do more than add, subtract, multiply etc.
- We want to act on our variables. We do this with operators & **functions**
 - *Each function* has a unique name
 - *Each function* requires some input, and the function can be modified using arguments
 - *Each function* will produce an output
- Remember:
 - objects are *nouns*
 - functions & operators are *verbs*
 - arguments are *adverbs*

Recap of using variables

Where do you find functions?

- Some exist in R by default
 - `t.test()`
 - `cor()`
 - `scale()`

Lots of people all over the world write their own functions. And they (rightly!) think it's useful to share these functions.

Packages

What is a **package**?

- A collection of functions and datasets
- Open source

Packages are the reason R is so powerful!

- While you can definitely write your own functions, most of what you need to do someone else has already done for you!

How do I get packages?

Packages can be downloaded from the *CRAN* (Comprehensive *R* Archive Network)

You will do this from inside *R*

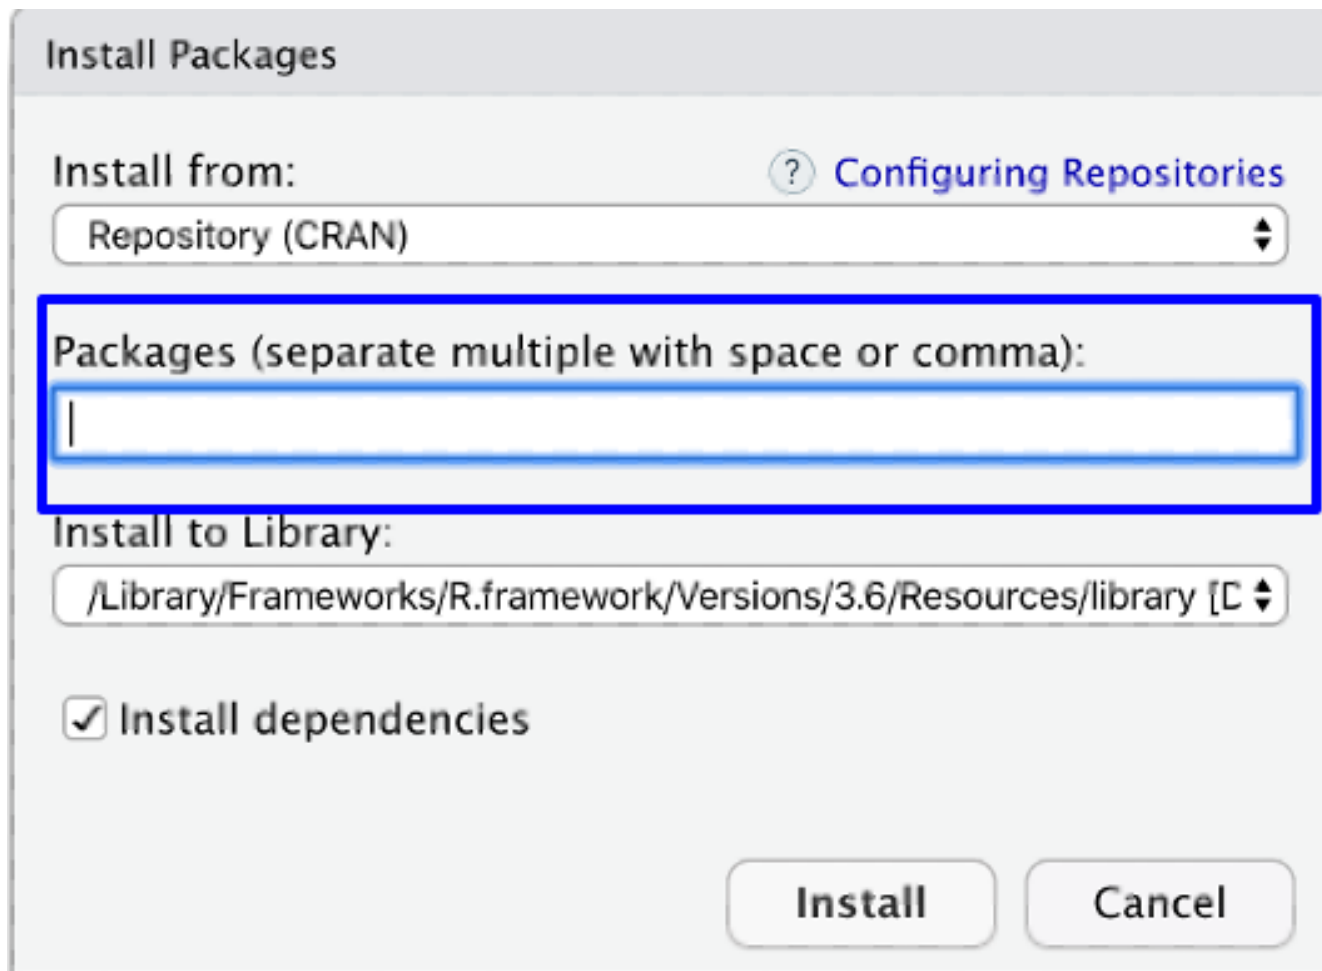

Need to be connected to the internet!

2 ways to install packages

1. Install button in the Packages tab
2. R Code

Either way, you need to know the name of the package

Install Button

The image shows the 'Install Packages' dialog box in RStudio. The title bar is 'Install Packages'. Below the title bar, there is a section 'Install from:' with a help icon and a link to 'Configuring Repositories'. Below this is a dropdown menu showing 'Repository (CRAN)'. The next section is 'Packages (separate multiple with space or comma):' followed by a text input field. This input field is highlighted with a blue rectangular border. Below the input field is the 'Install to Library:' section with a text field showing the default path: '/Library/Frameworks/R.framework/Versions/3.6/Resources/library'. At the bottom left, there is a checked checkbox labeled 'Install dependencies'. At the bottom right, there are two buttons: 'Install' and 'Cancel'.

Install Packages

Install from: [? Configuring Repositories](#)

Repository (CRAN)

Packages (separate multiple with space or comma):

|

Install to Library:

/Library/Frameworks/R.framework/Versions/3.6/Resources/library [C]

☒ Install dependencies

Install Cancel

Packages (separate multiple with space or comma):

Install to Library:

/Library/Frameworks/R.framework/Versions/3.6/Resources/library [C]

☒ Install dependencies

Install Cancel

R code to install packages

```
install.packages("psych")
```

Packages

INSTALLING

- Downloading the package and saving it to your computer
- Like installing Microsoft Word on your computer
- Do this **ONCE**

LOADING

- Like opening Microsoft Word to write a paper
- Once a package is loaded, you can use all of it's functions and datasets are ready to use
- You need to do this **EVERY TIME** you open a new **R** session

2 ways to load packages

1. Checkbox in the packages tab (not recommended)
2. R code

Either way, you need to know the name of the package

R code to load packages

```
library(psych)
```

Dependencies

```
> library(lme4)  
Loading required package: Matrix  
Loading required package: Rcpp
```

Uses functions from other packages

Installed automatically

Loaded automatically

Help! (again)

Ways to find documentation:

`?psych` -- opens documentation specific to that package or function

`??psych` -- searches for this in all documentation (that you have installed and loaded)

To find a package that does what you need: **Google**
